

Sonoco Transportation Services (STS) is pleased to announce a partnership agreement with the Flex-mor Transport Group. STS is the dedicated fleet working for Sonoco Canada Corporation in Ontario and Quebec. They operate 70% three axle equipment involved in moving paper into and out of the three Canadian Mills that they serve. This inter and intra provincial dedicated fleet will allow Flex-mor, primarily a cross-border carrier, to offer a much broader service to its current and future customers. Both parties are excited about the new opportunities provided and the combined capacity of the integrated fleets.

The Sonoco decision to partner with Flex-mor was based on a long term relationship which allowed us to realize that we shared the same core values. Customer service, safety and appreciation of the driver group that makes any fleet successful.

Flex-mor Transport has made a major investment in technology over the past five years, with satellite communication, electronic dispatch and software that tracks shipments from order entry to freight invoicing. This leading edge technology was another key factor in our decision to partner with this group.

As we look to the future, our vision by midyear 2008, is one combined fleet, operating under Flex-mor authority and Flex-mor management. The technology is already shared by the Sonoco fleet and we continue to take steps in the direction of a centralized dispatch for both groups operating out of the Brockville terminal.

While many reasons exist for the direction we have taken the primary motivation remains our ability, as a combined fleet, to provide a complete service package to our customers, locally, provincially or cross border.

Respectfully,

D. Lindsay Welsh
Canadian Logistics Manager
Sonoco Canada Corporation
